I untangle complex ecosystems to design seamless products. Focused on driving end-to-end product strategy to turn user needs into significant business impact. I care about the whole flow, not just the screens, and see myself as the user's representative inside the business. Almost 3 years doing this for three of Mexico's largest insurers, AXA (top 3 auto), Mapfre (top 5) and Zurich, where every flow carried real financial decisions and real friction for the person on the other end. AI shows up in every phase for me, prototyping ideas early, working with developers as they build, and reading the data once it ships.

Experience

Lead Product Designer, Guros

Aug 2024 to Oct 2026 · Insurtech, Mexico and LATAM · Remote

Product Designer until Jun 2026, then promoted to Lead

- **Found the real reason users were dropping out of Mapfre Mexico's car insurance flow and grew sales 35.2% year over year fixing it**, by running user interviews and journey mapping that traced the block to a UX failure instead of price, raising completion of the key quote step from 56.5% to 97.4%.
- **Shipped 3 connected products for AXA's e-commerce channel** (one of Mexico's top 3 auto insurers), covering the full customer-to-agent journey, by running user interviews and journey mapping with AXA stakeholders and leading the team that built lead scoring into every drop-off point.
- **Won AXA's account with a live, interactive prototype**, using AI assisted development instead of a static deck, then ran an internal workshop to bring the rest of the team into AI assisted ways of working.
- **Built Guros' design team from the ground up**, from hiring case study to final decisions, by co-leading a cross-functional team of designers and engineers with an Engineering Manager.
- **Owned delivery end to end** across auto quoting, claims reporting and partner activation, turning funnel research into prioritized roadmap decisions, by working side by side with development and weighing expected value against cost.

UX/UI Designer, Binnacle App

Feb to Aug 2024 · Startup, company metrics dashboards · Remote

- **Shipped desktop, app and web interfaces** from wireframes to high-fidelity prototypes, measured by consistent UI across platforms, by building the design system from scratch.

Projects

Cofounder & Lead UX Designer, Pulso

Startup project, paused · Healthcare financing · Mexico

- **Opened healthcare financing to patients turned away by traditional credit**, judging eligibility from their real financial behavior instead of a credit history, by running user interviews and journey mapping that shaped a WhatsApp signup flow and take-home Exit Kit.

Inclusive Finance Challenge, United Nations (UNDP) Mexico

2nd place · Insurance & finance · 2025

- **Won 2nd place designing inclusive finance for underserved women entrepreneurs in rural Mexico**, giving them microinsurance with no app required, by running user interviews and journey mapping that led to folding coverage into the weekly loan payment they already make.

Education

Bachelor's degree in Product Design, ITESM (Tecnologico de Monterrey) · 2019 to 2023 (4 year program)

- Trained end to end product thinking, from user research to prototyping to a shipped solution, the same loop I now run with business impact behind it.

University of Leeds, Leeds, UK · Minor · Semester abroad

- A minor with focus in business management, media psychology, color psychology, basic electronics and sustainability, built to understand the business side of a product decision, not only its design.

Aalto University, Helsinki, Finland · Summer program

- Environmental design, circular economy and co design, a structured look at how a whole system needs to work.

Certificates (Stanford / Google)

- Stanford's UX/UI Design for AI Products (2026), covering AI ethics, human-AI interactions, UX and building user trust in AI systems, and generative agents.
- Google UX Design Professional Certificate (2025).

Strengths

Business analysis & data literacy, Prioritization by expected impact, usability testing, user interviews, journey mapping, product analytics, A/B testing, Google Analytics, Datadog, metrics driven iteration.

Stakeholder management, Translating customer journeys into business decisions, leading cross functional teams across design and engineering, enterprise client sessions with AXA, Mapfre and Zurich.

Artificial intelligence, Vibe coding, AI assisted prototyping, Figma, Bolt, Claude Design, Claude Code, Stanford's UX/UI Design for AI Products certificate, built and secured an OpenAI based chatbot for my own portfolio (Claude, GitHub, Vercel and Supabase).

Leadership & personal growth, Team growth and hiring, coaching, 1 on 1s, task scoping, two way feedback, aligning design and business through data.

Languages, English (C2) · Dutch (B1, conversational, actively learning) · Spanish (native).
